

Associate-level programs offer different degrees for a variety of careers. These 2-year programs may provide the necessary training to prepare students for entry-level positions in fields like nursing, graphic design and other vocational areas.

An associate's degree program in music recording is designed for students who want to gain an overview of the field and an understanding of audio electronics and theory. Some possible courses include audio techniques, multi-track studio techniques, audio technology and audio maintenance and repair. Elective courses are also required for degree completion, and they give students an opportunity to specialize in a particular area of interest in the field.
