

Associate in Pharmacy Technician

Associate-level programs offer different degrees for a variety of careers. These 2-year programs may provide the necessary training to prepare students for entry-level positions in fields like nursing, graphic design and other vocational areas.

A pharmacy technology associate's degree program teaches students about the reaction between the human body and certain drugs. They learn how to process insurance details, package or label orders and monitor inventory. Typically, these programs require an internship under the supervision of a pharmacist. Graduates are prepared for professional certification. Applicants for these 2-year programs need a high school diploma or GED.
